Register at post@holmy.no or +47 48010640 by 14 november 2022 (Limited Seats).

SimX is a VR (Virtual Reality) training environment in which trainees can perform realistic lifelike medical examinations and treatments. The trainees can communicate with the virtual patient(s), listen with a stethoscope and measure blood pressure. Trainees can select from more than 300 examinations or treatments. Patients will respond as if they were real human patients. Vital signs will change in response to elapsed time or executed interventions. The state of the patient is visible through vital signs as well as visual parameters (e.g. skin color) and patient behavior like agitation or awareness.

One or more trainees can access SimX using a wireless Oculus Quest2 headset
